Crash Rated Barriers, Gates, Fences and Bollards

Attachable Net Fence™

Patented December 1990

Description

Chain link fences were designed to stop people and animals, not vehicles! The Attachable Net Fence™ provides a complete counter intrusion system by turning an ordinary chain link fence into an anti-vehicular barrier.

If an existing chain link fence surrounds your installation, you add the strength that makes it impenetrable by vehicles with Attachable Net Fence™. The system is designed to stop a 15,000-lb. vehicle traveling at 30 mph or can be custom designed to exceed this crash rating.

Application

The Attachable Net Fence™ may be added to many different fence styles and perimeter applications. It is ideal for protecting large open areas which are vulnerable to vehicle intrusion. Additionally for situations where concrete vehicle barriers might be a consideration, the Attachable Net Fence™ can provide equal or superior security in an attractive fashion without obstructing the line of sight. Designs are customized to enhance existing fences affording beauty and optimum security. The Attachable Net Fence™ system is perfect for use with Crisp's roadway barriers especially when the fence in place must be retained.

Installation

The Attachable Net Fence's™ incredible vehicle-stopping capability is achieved by the use of specially designed high-strength lateral members (rails) in conjunction with uniquely constructed posts, anchorages, and cables.

The Attachable Net Fence™ is erected in 200-foot sections with special brackets. These brackets attach the rails and cables to the existing line post about 24 inches above the ground for a single rail system. Steel buttresses are placed in concrete at corners as well as at 200-foot intervals along the perimeter.

Line posts are installed at 50-foot intervals. This gives added strength and elasticity to the cable. After placement, the superposts are filled with concrete.

Maintenance

Because the Attachable Net Fence™ is constructed of high strength materials and is galvanized, epoxy coated, or polymer coated minimal maintenance is required. It is also available powder coated or painted in over 300 colors.

Ongoing Product Support

- Timely response to customer inquires
- On-site installation oversight
- Highly qualified support personnel who hold government security clearances

Product Documents

- Detailed installation drawings and instructions specific to each customer product
- Crash certification, warranty, technical specification and operating and maintenance manuals

Features

- Custom designed to fit the existing fence perimeter setting
- Retrofit to existing physical perimeter security system
- Various post spacings and heights
- One or more rails
- Crash rating certification provided
- Maintenance free
