

# Concrete Barrier Gate™

The Concrete Barrier Gate™ becomes an integral part of a standard concrete barrier wall. The interlocking strength of the concrete barriers to the gate and its cables prevents vehicular intrusion while allowing for controlled vehicular ingress and egress. The gate will be manufactured to your required dimensions.

## Description

This gate provides full protection from vehicular intrusion in locations where a temporary concrete barrier wall with a gate is desired. It is also suitable for use where penetration or excavation of the ground is prohibited or where conditions make it impractical to erect standard gates or barriers. These locations can be protected with this gate assembly and just two concrete barriers.

This gate system is designed to meet the customers desired dimensions. A variety of gate types and styles are available. Fence may be added to prevent pedestrian intrusion if the vehicular barrier wall is being used to reinforce an existing fence.

## Applications

This gate's surface-mounted transportable design makes it ideal for temporary use, or where the ingress and egress control point requires relocating.

## Installation

The gate is delivered in three primary pieces - two steel saddles and the gate assembly itself. Each saddle is secured firmly to an end of a concrete barrier and acts as a gate post for mounting the gate. Vertical pins and locks are used for securing the gate's cables to the steel eye bolts in the ends of the barriers. To open the gate the pin is removed from the tamper-proof lock on the latch end and

## Product Documentation

- Detailed installation drawings and instructions Specific to each customer product
- Crash certification, warranty, and technical specification
- O&M Manual spare parts list - Most parts are off-the shelf

## Ongoing Product Support

- Timely response to customer inquiries
- On-site installation oversight
- On-site maintenance and troubleshooting assistance
- Highly qualified support personnel who hold government security clearances
- Training of customer security and maintenance personnel

## Consider the Advantages

- Designed to fit your concrete barrier specifications
- Minimal installation time and maintenance free
- Variety of gate designs and colors
- May be stored fully intact for use in other locations
- Tamper-proof locks
- Galvanized steel or polymer coated
- Fully operational and effective without attendants
- Crash rating certification provided
